</thead>
<tbody>
<tr>
<td>Please describe the Smart Grid systems and equipment to which this standard is applied</td>
<td></td>
</tr>
</tbody>
</table>

### Relationship to Other Standards or Specifications

1. Which standards or specifications are referenced by this standard?  

   Which standards or specifications are related to this standard?  

   Which standards or specifications cover similar areas (may overlap)?  

   What activities are building on this work?

### Dept of Energy Smart Grid Characteristics

Please describe how this standard may encourage each of the following:

<table>
<thead>
<tr>
<th>Enables informed participation by customers</th>
<th>☐ Yes ☒ No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accommodates all generation and storage options</td>
<td>☐ Yes ☒ No</td>
</tr>
<tr>
<td>Enables new products, services and markets</td>
<td>☐ Yes ☒ No</td>
</tr>
<tr>
<td>Provides the power quality for a range of needs</td>
<td>☐ Yes ☒ No</td>
</tr>
<tr>
<td>Optimizes asset utilization and operating efficiency</td>
<td>☐ Yes ☒ No</td>
</tr>
<tr>
<td>Operates resiliently to disturbances, attacks, and natural disasters</td>
<td>☐ Yes ☒ No</td>
</tr>
</tbody>
</table>
Priority Areas Previously Mentioned by FERC and NIST

Please describe if and how this standard may be applied in each of the following areas. Note that there is space in section Error: Reference source not found to discuss any other significant areas where the standard may be applied.

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>

</tr>
</tbody>
</table>

**J. Notes**

Please present here any additional information about the standard that might be useful:

1. This standard describes electrical principles for application and does not discuss two-way communication or data transfer.
## Section II: Functional Description of the Standard

### GridWise Architecture: Layers

Please identify which layers this standard specifies, as described in http://www.gridwiseac.org/pdfs/interopframework_v1_1.pdf, and the applicable section of the standard. Note the mapping to the Open Systems Interconnect (OSI) model is approximate.

<table>
<thead>
<tr>
<th>Layer Description</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Layer 8: Policy</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Layer 7: Business Objectives</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Layer 6: Business Procedures</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Layer 5: Business Context</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Layer 4: Semantic Understanding (object model)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>6. Layer 3: Syntactic Interoperability (OSI layers 5-7)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7. Layer 2: Network Interoperability (OSI layers 3-4)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8. Layer 1: Basic Connectivity (OSI layers 1-2)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### GridWise Architecture: Cross-Cutting Issues

Please provide an explanation in the box beside the heading for any questions answered “Not applicable”. If the question is not applicable because the function is provided in another layer or standard, please suggest any likely candidates. Note that “the standard” refers to the technology specified by the standard, not the documents themselves.

</table>

#### System Evolution and Scalability

<table>
<thead>
<tr>
<th>Question</th>
<th>Yes</th>
<th>No</th>
<th>Not applicable</th>
</tr>
</thead>
<tbody>
<tr>
<td>35. What factors could limit the number of places the standard could be applied?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>36. What steps are required to increase the size of a system deploying this standard?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>37. Is the information model separate from the transport method?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>38. Does the standard support alternate choices in the layers(s) below it?</td>
<td></td>
<td></td>
<td>No layers below</td>
</tr>
<tr>
<td>39. List the most common technology choices for layers implemented below this standard</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>40. Does the standard support multiple technology choices in the layers above it?</td>
<td></td>
<td></td>
<td>No layers above</td>
</tr>
<tr>
<td>41. List the technologies or entities that would most commonly use this standard in the layer above</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>42. Please describe any mechanism or plan to ensure the standard is as backward-compatible as possible with previous versions</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>43. Please describe how the design of this standard permits it to be used together with older or legacy technologies</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>44. Please describe how the design of this standard permits it to co-exist on the same network or in the same geographic area with similar technologies, and give examples</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

#### Architectural Principles

Please describe how this standard may apply any of these principles:

1. Symmetry – facilitates bi-directional flow of energy and information
2. Transparency – supports a transparent and auditable chain of transactions
3. Composition – facilitates the building of complex interfaces from simpler ones
4. Loose coupling – can support bilateral and multilateral transactions without elaborate pre-arrangement
5. Shallow integration – does not require detailed mutual information to interact with other components
| 6. | Please list any other architectural models, reference architectures or frameworks this standard was designed to be compliant with, e.g. W3C, IEC TC57, OSI and how it fits those models |
