NIST Smart Grid Interoperability Panel as a Paradigm for "Smart" Water Standards

Dr. David Wollman

Deputy Director, Smart Grid and Cyber-Physical Systems Program Manager, Smart Grid Standards and Research Engineering Laboratory National Institute of Standards and Technology (NIST) U.S. Department of Commerce

National Institute of Standards and Technology

- Non-regulatory agency in the U.S. Department of Commerce
 - Originally National Bureau of Standards (established 1901)
 - NIST Laboratories measurement science research activities at two main campuses in Gaithersburg, Maryland and Boulder, Colorado

, Inc./Steve Hall © Hedrich Blessing

- \$567M (USD) for Laboratories; ~3000 employees (3 Nobel Prizes), 2800 associates, U.S. National Metrology Institute
- > Strong partnerships with industry, academia, government
- Research, calibrations, standard reference materials, data ...
- Engineering, IT, Physical Measurement, Material Measurement Labs

Smart Grid Success Factors

- Champions: identification of smart grid as national priority by Congress and Administration
- Active Coordination: within Federal Government and with private sector, standards developing organizations, and regulatory community
- Leadership and Visibility: NIST Three-Phase Plan with White House kickoff
- Planning, Organization and Governance: NIST standards process including NIST Framework and Smart Grid Interoperability Panel
- Funding: ARRA plus appropriations (including DOE)
- Federal Government convening function: workshops, stakeholder input, targeted activities
- Expertise: leverage existing expertise, build new, address longer-term measurement science/R&D needs

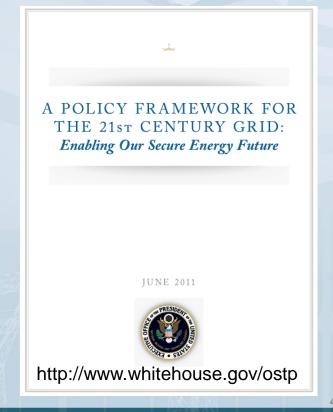

Smart Grid – A U.S. National Policy

- "It is the policy of the United States to support the modernization of the Nation's electricity [system]... to achieve...a Smart Grid."
- Congress, Energy Independence and Security Act of 2007

"We'll fund a better, smarter electricity grid and train workers to build it..." President Barack Obama

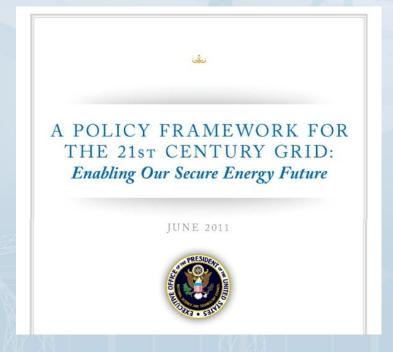

Standards – Key Aspect of US Smart Grid Policy

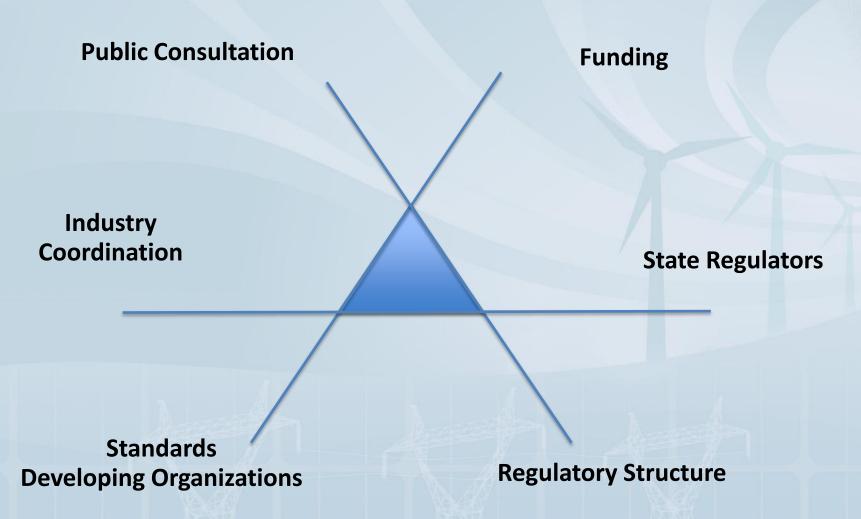

The Energy Independence and Security Act of 2007 gives NIST "primary responsibility to coordinate development of a framework that includes ... standards ... to achieve interoperability of smart grid devices and systems..."

White House June 2011 Policy
Framework includes 4 key Federal
policy recommendations:
enable cost-effective smart grid
investments, unlock innovation,
empower and inform consumers, and
secure the grid

US Government Roles in Smart Grid

US Government Roles in Smart Grid

Public Consultation, Utility Engagement, Agency Coordination

\$ R&D (and ARRA – stimulus funding), National Labs

Industry Coordination, R&D

State Regulators
NARUC – National Association
of Regulatory Utility

Standards **Developing Organizations**

Regulatory Structure

NERC – North American Electric Reliability Corporation NAESB – North American Energy Standards Board

Federal Smart Grid Task Force EISA Title XIII, Section 1303

Responsible for ensuring awareness, coordination, and integration of the diverse smart grid activities in the US Federal Government

Purpose

- √ Coordinate inter-governmental smart grid activities
- ✓ Collaborate on interoperability framework
- ✓ Review biannual smart grid system report mandated by US Congress
- ✓ Ensure awareness of Federal smart grid activities
- ✓ Support the National Science and Technology Council / Interagency Working Group on Smart Grid

Member Organizations

- Department of Energy
- Federal Energy Regulatory Commission
- Department of Commerce
 - International Trade Administration
 - National Institute of Standards and Technology
 - National Telecommunications and Information Administration
- Environmental Protection Agency
- Department of Homeland Security
- Department of Agriculture
- Department of Defense
- Federal Communications Commission
- Department of State
- National Aeronautics and Space Administration

- National Oceanic and Atmospheric Administration
- United States Trade Representative
- U.S. Trade and Development Agency
- General Services Administration
- Council of Environmental Quality
- Office of Science and Technology Policy
- Federal Trade Commission

Coordination and Acceleration of Smart Grid Standardization: NIST Three Phase Plan

PHASE 1

Identify an initial set of existing consensus standards and develop a roadmap to fill gaps

Summer 2009 Workshops Draft Framework Sept 2009

Smart Grid Interoperability Panel Established Nov 2009

NIST Smart Grid Interoperability
Framework 1.0
Released Jan 2010

PHASE 2

Establish Smart Grid Interoperability Panel (SGIP) public-private forum with governance for ongoing efforts

PHASE 3
Conformity Framework
(includes Testing and
Certification)

NIST Framework 2.0 Released Feb 2012 SGIP selfsustaining business plan

2009

2010

2011

2012

White House kickoff meeting

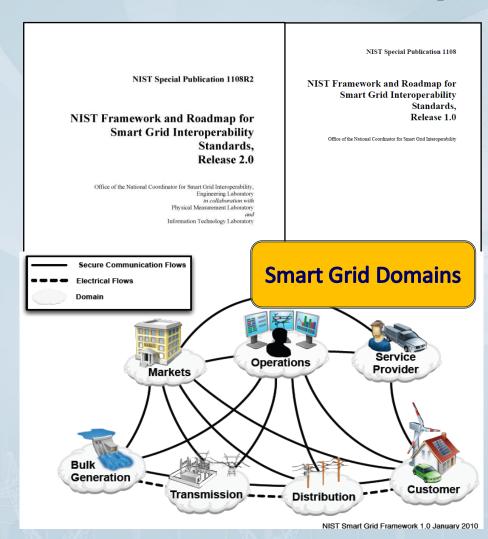

- Hosted by Secretaries of Energy and Commerce
- Many industry CEOs including utilities, federal officials, standards developing organizations, ...
- Commitment to support NIST standards process, including industry staff participation in workshops, standards acceleration, ...

NIST Smart Grid Framework and Roadmap

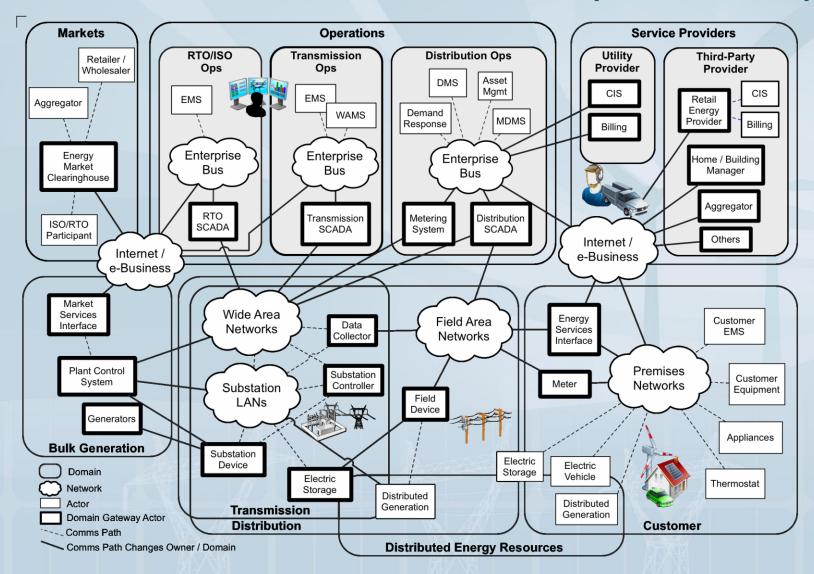

- Release 1 published January 2010
 - Extensive public input and review
 - Completed in less than 1 year
 - Smart Grid Vision and Reference Model
 - Identified existing standards
 - Priority Action Plan Projects
 - Companion Cyber Security Strategy
 NISTIR 7628
- Release 2 published January 2012
 - Extensive involvement of Smart Grid
 Interoperability Panel plus public input
 and review
 - Improvements include revised architecture, Interoperability Process Reference Manual, additional identified standards, completed and new Priority Action Plans, SGIP structure ...

http://www.nist.gov/smartgrid/

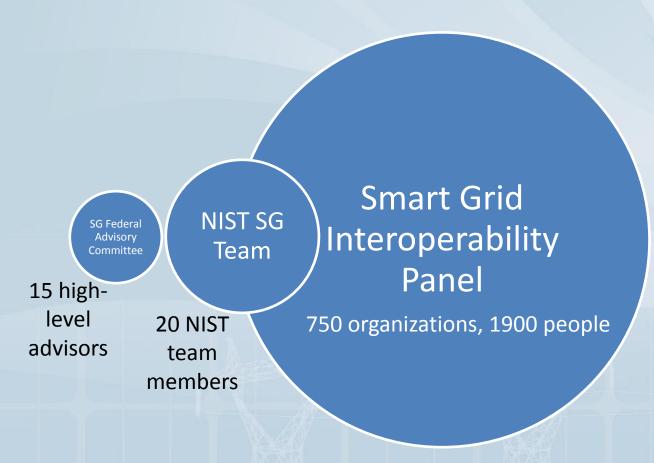

NIST Smart Grid Reference Model (Release 2.0)

(Extended) Organization

"[NIST] shall seek input and cooperation of other relevant federal and state agencies...and private sector entities" – EISA 2007

- SGIP: Public-private partnership created in Nov. 2009
- Open, public process with international participation
- Coordinates standards development
- Web-based participation
- Transitioning to legal entity private-public partnership

Stakeholders in the Process

1	Appliance and consumer electronics providers
2	Commercial and industrial equipment manufacturers and automation vendors
3	Consumers – Residential, commercial, and industrial
4	Electric transportation industry Stakeholders
5	Electric utility companies – Investor Owned Utilities (IOU)
6	Electric utility companies - Municipal (MUNI)
7	Electric utility companies - Rural Electric Association (REA)
8	Electricity and financial market traders (includes aggregators)
9	Independent power producers
10	Information and communication technologies (ICT) Infrastructure and Service Providers
11	Information technology (IT) application developers and integrators

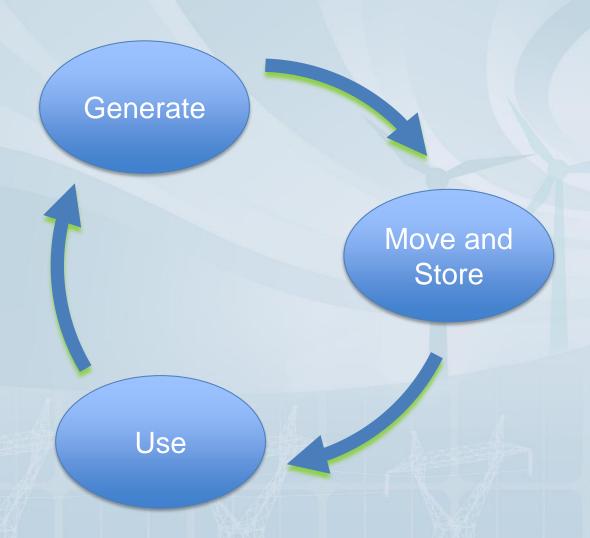

12	Power equipment manufacturers and vendors
13	Professional societies, users groups, and industry consortia
14	R&D organizations and academia
15	Relevant Government Agencies
16	Renewable Power Producers
17	Retail Service Providers
18	Standard and specification development organizations (SDOs)
19	State and local regulators
20	Testing and Certification Vendors
21	Transmission Operators and Independent System Operators
22	Venture Capital
	The state of the s

SGIP Structure Diagram

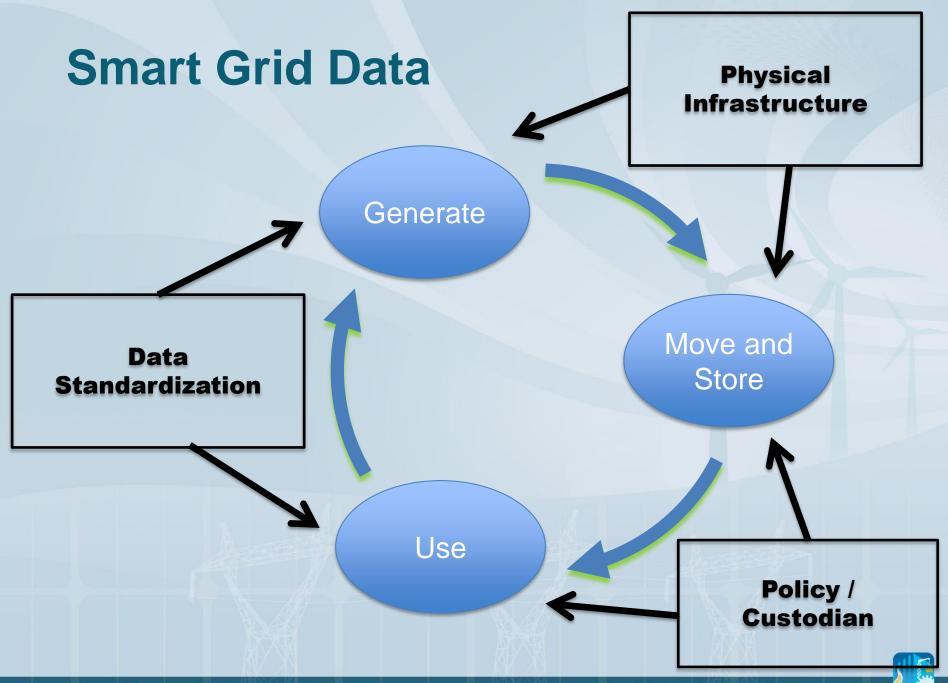

Smart Grid Data – Example of Innovation

Smart Grid Data – Energy Usage Information

- Physical Infrastructure
 - Smart Meters
 - Meter Communications and Utility Back-end Systems
- Privacy / Custodian
 - US privacy blueprint and privacy efforts, state efforts
 - DOE-led smart grid privacy (with Smart Grid Task Force)
 - Third Party data access authorization by consumers
 - SGIP Cyber Security Working Group (CSWG)
- Standardization
 - Energy Usage Information (SGIP Priority Action Plan 10)
 - Green Button Initiative (SGIP Priority Action Plan 20)

Goal: Ecosystem of innovative smart grid products and services based on energy usage information

Green Button Initiative (OSTP CEQ DOE NIST)

- Common-sense idea that electricity customers should be able to download <u>their own energy usage information</u> in a consumer- and computer-friendly electronic format from their utility's secure website.
- A common experience, from provider to provider, setting clear expectations that consumers' information is theirs to have and share.

The ecosystem of companies and organizations supporting and using Green Button data...

Apps developers

wattvision

Device manufacturers

Utility software vendors

EFFICIENCY2.0

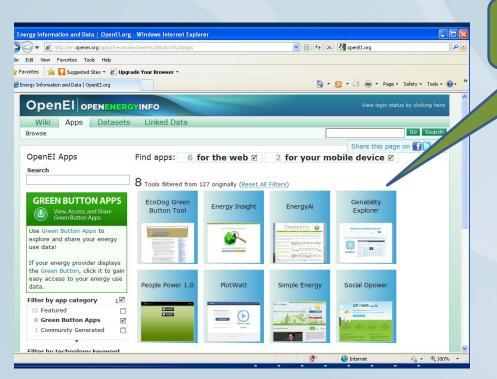

Green Button Apps and Competitions – DOE

Green Button Apps!

Are you a software developer?

Build the best energy app
and you could win part of a

\$100,000 prize.

Winning entries were announced May 22, 2012

http://openei.org

http://appsforenergy.challenge.gov/

DOE Smart Grid Data Access Funding Opportunity Announcement – DOE announced 7 winners on May 22, 2012

Smart Grid Success Factors

- Champions: identification of smart grid as national priority by Congress and Administration
- Active Coordination: within Federal Government and with private sector, standards developing organizations, and regulatory community
- Leadership and Visibility: NIST Three-Phase Plan with White House kickoff
- Planning, Organization and Governance: NIST standards process including NIST Framework and Smart Grid Interoperability Panel
- Funding: ARRA plus appropriations (including DOE)
- Federal Government convening function: workshops, targeted activities, challenges, apps
- Expertise: leverage existing expertise, build new, address longer-term measurement science/R&D needs
