

U.S. Smart Meters at a Glance

It's no wonder that smart meter rollouts have skyrocketed with supporting business case findings such as ComEd customers saving potentially \$2.8 billion on their electric bills over the 20-year life of the smart meters. Largely due to the aggressive U.S. effort to modernize its electric grid, pros and cons (for example PG&E will now offer 'opt out option') for smart meters are still aggressively being debated; nonetheless the number of smart meters installed in the U.S. has ballooned over the past several years – with just over fifty utilities deploying the bulk of the investment.

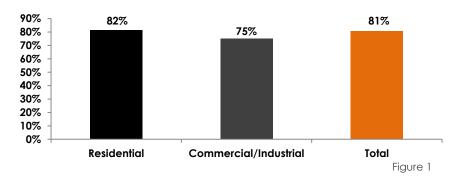

The Institute for Electric Efficiency (IEE) recently issued the white paper, "The Costs and Benefits of Smart Meters for Residential Customers" (July 2011), which states that investments in smart meter systems make economic sense, and that the consumer-driven savings could be much greater: "We believe that by investing in and focusing on customer education and engagement most customers will migrate from passive engagement in energy management to much more active strategies," said Lisa Wood, executive director, IEE.²

Zpryme analyzed data from the U.S. Energy Information Administration (EIA) in an effort to not only breakdown smart meter deployments by utility, but also to zero-in on the drivers that will bridge the U.S. energy divide.

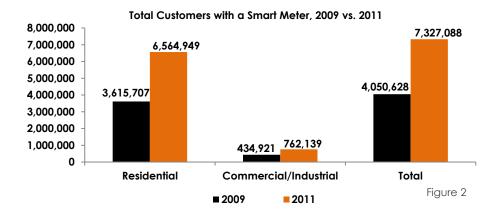

Highlights³

• From 2009 to March of 2011, the number of smart meters installed among the group of 51 utilities grew by 81%.

• From 2009 to March 2011, the group of 51 utilities grew their smart meter base from 4.0 million to 7.3 million.

 $^{^3}$ (figures 1 – 3) For the 51 utilities in analysis who had data in the EIA 861 2009 file 8 and the EIA 826 2011 file. Note that data for 2011 is as of March 2011. See Table 1 and Table 2 for utility level data.

² IEE. The Costs and Benefits of Smart Meters for Residential Customers, July 2011

¹ www.zpryme.com | www.smartgridresearch.org

 In 2009, 18% of customers served by the 51 utilities had a smart meter. As of March 2011, this figure has increased to 34%.

% of Total Customers with a Smart Meter, 2009 vs. 2011

Insights

- Despite poor economic conditions in the U.S., utilities will continue to deploy smart meters at a rapid pace in the near-term. However, the smart grid stimulus grants appear to be a key driver of the major smart meter deployments taking place in the U.S.
- The U.S. is on pace to meet the Obama Administration's goal of 40 million smart meters by 2015.
- The market for consumer facing energy management applications, software, and devices will enter a high-growth phase in 2012 as utilities seek to leverage the full benefits of the smart grid.

Look for utilities that have deployed smart meters to more than 50% of their customer base to lead the market for products and technologies beyond AMI and smart meters.

Methodology

To conduct the analysis, Zpryme analyzed the Energy Information Administration's (EIA) Form EIA-826 Monthly Electric Utility Sales and Revenue Data from March of 2011, and Form EIA-861 (file 8), Annual Electric Power Industry Report, for calendar year 2009. Both data sets contain advanced metering infrastructure (AMI) meter data by utility. Utilities must report the number of AMI or smart meters by customer type on both forms. To be included in the analysis, the utility must have smart meter data in both the EIA-861 and EIA-826 file. There were 51 utilities that met such criteria, and thus were included in Zpryme's analysis.

- EIA-861 AMI Data: The EIA-861 data for calendar year 2009 reveal that 233 utilities had at least one or more smart meters installed. Further, the data show that a total of 9,611,401 smart meters were installed in 2009.
- EIA-826 Data: The EIA-826 data contains monthly smart meter data for January, February, and March of 2011. As of March 2011, the data reveal that 89 utilities have at least one or more smart meters installed. Among the 89 utilities, they have a combined total of 8,313,023 smart meters. It is important to note that as of March 2011, only a fraction of all U.S. utilities have been surveyed.

- As explained above, when the data were matched against each other, 51 utilities contained data in both the EIA-861 and EIA-826 files.
- Once the data on the 51 utilities for 2009 and 2011 were pulled from both files, the data was then analyzed to identify the increase or decrease in the number of smart meters from 2009 to 2011 (March) for each utility, and for the group as whole. The 51 utilities are listed in table 1 and table 2 of this report.

Key Findings (51 Utilities Analyzed)

- In 2009, the group of 51 utilities served a total of 22.3 million customers. As of March 2011, the same utilities served 21.6 million customers.
- In 2009, the group of 51 utilities had just over 4.0 million smart meters. Residential smart meters totaled 3.6 million while commercial and industrial meters totaled 434,921 in 2009. Eighteen percent of all customers served by the 51 utilities had a smart meter (18% of residential customers and 16% of commercial/industrial customers).
- As of March 2011, the group of 51 utilities had 7.3 million smart meters. Residential smart meters totaled 6.6 million while commercial and industrial meters totaled 762,139 in 2011. Thirty-four percent of all customers served by the 51

- utilities had a smart meter (34% of residential customers and 30% of commercial/industrial customers).
- From 2009 to March of 2011, smart meters among the group of 51 utilities grew by 81% (addition of 3.3 million meters). During this time period, the number of residential meters grew by 82% while commercial and industrial meters grew by 75%.

Utility Spotlight: OG&E

- The \$366 million smart meter project began with pilots in northwest Oklahoma City and Norman and has now expanded its footprint to the southern region of OG&E's territory, as well as Moore and parts of Oklahoma City.
- OG&E has installed approximately 350,000 smart meters since February of 2010.
- OG&E projects to install smart meters for nearly 800,000 customers by the close of 2012.4

Among the 51 utilities, the top 5 utilities by the number of smart meters installed as of March 2011 were Georgia Power Co (Georgia), PPL Electric (Pennsylvania), Portland General Electric (Oregon), Salt River Project (Arizona), and Wisconsin Power & Light (Wisconsin). As of March 2011, these 5 utilities had 1.7 million, 1.4 million, 0.8 million, 0.6 million, and 0.4 million smart meters, respectively.

⁴ Jay F. Marks. The Oklahoman, OG&E will expand smart grid program to Midwest City, Del City. August 18, 2011
